* The *Ekahi* model features a unique integrated murphy bed/sofa system manufactured by SustainaFest Sponsor, [Resource Furniture](#). While the dimensions used in during the framing of the house were designed with this item in mind, the system has no structural bearing on the house and alternative bedding/seating options may be incorporated. The builder should consider the space allowance before selecting an alternative option.

** This house was designed with sustainable materials and energy efficient appliances. Actual constructions costs may vary greatly from the above estimate based on, market pricing and individual material/appliance choices
